

Use jq to get list order\_id from text file transaction-log.txt and use curl or wget to request http and get response write to output file  
Same below command use 2 command line

```
ids=$(jq -r '.order_id' transaction-log.txt | paste -sd "," -)
curl -G "https://example.com/api/" --data-urlencode "order_id=$ids" -o output.txt
```

Or 1 command line

```
ids=$(jq -r '.order_id' transaction-log.txt | paste -sd "," -) && curl -G
"https://example.com/api/" --data-urlencode "order_id=$ids" -o output.txt
```

or you can run script  
execute.sh in my repository
